

Run every site from one reliable command centre.

FacilityPro brings fault reporting, work orders, preventive maintenance, assets and costs into one system that technicians, managers, occupants and vendors all use, on the web and on the phone, in English and Vietnamese.

Why teams choose FacilityPro

Nothing slips through

Every request lands in one list with an owner, a priority and a response target.

Planned, not reactive

Preventive schedules by calendar or meter create work orders before things break.

Clear numbers

Response times, overdue work, PM completion and cost per site, ready without spreadsheets.

Everything your facilities team runs on

Work & maintenance

- Issue reporting and QR codes
- Work orders and checklists
- Preventive maintenance
- Permits to work and approvals

Assets & inventory

- Asset register and history
- Meters and readings
- Parts and stock
- Vendors, contracts and documents

Occupant services

- Tenant portal
- Room, facility and desk booking
- Surveys and broadcasts
- Multi-channel inbox

Spend & budgets

- Budgets and expenditure
- Procurement
- Vendor invoices
- Cost tracking

Insights & connections

- Reports and dashboards
- TV display boards
- IoT sensors and alerts
- Integrations

AI & automation

- No-code workflows
- Scheduled automation
- Smart assistant
- Sentiment scoring

How it works

1

Report

Occupants scan a QR code, use the public link, email or Zalo. No app or account needed.

2

Assign

Workflows route the job to the right technician or vendor and start the SLA clock.

3

Fix

Technicians accept, update and close jobs on their phones, with photos, checklists and permits, even offline.

4

Improve

Reports and surveys show what is working, and preventive schedules keep assets healthy.

Built for

Commercial buildings

Residential

Hotels & hospitality

Hospitals & healthcare

Education

Industrial & manufacturing

Retail

Government

Property & facility management companies

Connects with

Email, Zalo and WhatsApp messaging · web push, email and SMS notifications · MQTT, HTTP, LoRaWAN (The Things Network, ChirpStack) and Modbus sensors.

Secure and ready to roll out

- Each organisation's data is isolated at the database level
- Roles for admins, managers, technicians, occupants and vendors
- Two-factor sign-in and a full audit trail
- Works on any phone from the browser, including offline
